User's Manual

V6.0A

Introduction

This product is 1D laser barcode scanner, also known as barcode reader or barcode gun scanner, is a technical equipment to read barcode information, by adopting optics theory, decoding and then transferring the information to computer terminal devices via the data cable, widely used in supermarket barcode billing, logistics barcode tracking, books ISBN barcode management, document barcodes voucher recording, industrial automation applications.

This scanner adopts ARM 32bits CPU, full-featured, rich in decoding barcodes types, including: Industrial 25; Standard 25; Matrix 25; China post 25; Interleave 25; Code 11; Codebar; MSI/Plessey; UK/Plessey; Code39; Standard 39; Code 39 full ASCII; Code 32; Code 93; Code 128; UPC-A; UPC-E; EAN-13; EAN-8; EAN/UPC+2/+5; ISBN; ISSN; GS1-RSS14; GS1-limited; GS1-Expended; GS1 STACK (GS1 is optional) etc.

One scanner supports KB, USB-HID, RS232, USB-Virtual COM interfaces all (with interface automatic judgment), supports USB online firmware upgrade (DFU), supports serial command trigger and configuration (need to refer to other manuals), compatible with USB2.0, USB3.0, Windows NT, 2000, XP, WIN7, WIN8 etc.

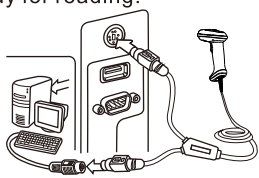
Before using the product, please read this manual carefully. Any help is needed, please contact us or our distributors. We will certainly be happy to help you.

CONTENTS

1. Getting Started

Installing keyboard wedge scanner

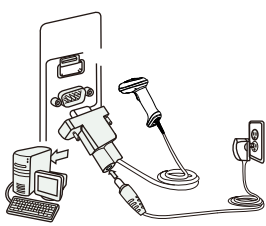
1.Make sure that the scanner has the correct cable for your system.
2.Turn off the power of the system.(or PC)
3.Unplug the keyboard from the system.
4.Connect Y cable to the system and keyboard.
5.Turn on the power of the system.
6.If the indicator LED lights up, buzzer sounds, the scanner is ready for reading.



Keyboard interface

Installing the RS-232 interface scanner

1.Make sure there is power supply for the scanner.
2.Connect the cable to the RS-232C port of the device.
3.Make sure the host device have communication program (Xcom,progam,Hyperterminal) before transmitting data.



RS-232 interface

Installing an USB interface scanner (connect two ends, the windows will detect automatically)

2. Setup Procedure

The general procedure to program is as follows.
1. Scan the command barcode “Start”.
2. Scan one or more parameters.
3. Scan the command barcode “End” to finish procedure.

Example 1. To set the RS232 parameters to 9600,8,0,1.
1.Scan the barcode “Start”.
2.Scan ”9600” ”8” ”0” ”1”.
3.Scan the barcode “End”.

Example 2. To set additional digit for UPC/EAN.
1.Scan the barcode “Start”.
2.Scan “Addenda 5 digit Enable”
3.Scan the barcode “End”.

Remark:
1.“Reserved” is reserved for firmware
2.This manual is subiected to change without notice.

*OFF

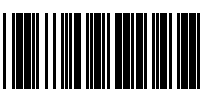
7-7. Set the barcode length as prefix (2 digits)



ON

*OFF

End

7-8. Prefix and Suffix for all codes

Prefix for all codes

Suffix for all codes

Example: add “SN” prefix to all codes.
Scan “Start” “Prefix for all codes” “S” “N” “Prefix for all codes” “End”.

7-9. Reading length setting for all codes

Minimun length for all codes

Maximum length for all codes

Reading length setting for all codes is used to limit the barcode length that can be read (is subjected to the data length).

For example: set the reading length as 5-10 digit.

Scan “Start” “Minimun length for all codes” “0” “0” “5” “Maximun length for all codes” “0” “1” “0” “End”.
After that, any barcodes shorter than 5 digits or longer than “10” digits can not be read successfully.
